Federal Risk Management Process Training Program

Course Description

The Federal Risk Management Process Training Program (RMPTP) certifies students on the Risk Management Process course of instruction and the Risk Management Process Tool. Both of which are the first to be certified by the Interagency Security Committee (ISC). Students develop the ability to prepare accurate federal facility risk assessments utilizing *The Risk Management Process: An Interagency Security Committee Standard Policy*.

Learning Objectives

Participants will master how to determine a Facility Security Level, identify a baseline Level of Protection, assess risks, determine the Necessary or Highest Level of Protection, and implement customized Countermeasures. Participants will also master how to determine threat, vulnerability and consequence utilizing the Design-Basis Threat Report.

Risk Management Process Tool

Participants receive the first ISC certified and approved Risk Management Process Tool designed to automate the process of calculating facility security levels and identifying the relevant countermeasures associated with various types of threats. Updates to the tool are provided at no extra charge.

Who Should Attend

Practitioners involved in the risk management decision-making process for the security of a facility and practitioners who participate in the development of security countermeasures, to include: Security Officials; Chairpersons; Facility Security Committees; Real Estate Acquisition Specialists; Federal Security Supervisors and Managers; and others involved with Federal facility acquisition, construction, and renovation projects.

Benefits

- Instruction on over 500 complex pages of documentation contained in *The Risk Management Process: An Interagency Security Committee Standard Policy* and appendices.
- Instruction on and access to the Risk Management Process Tool.
- Improve security posture for federal facilities.
- Use of an appropriate risk assessment methodology to develop/evaluate security countermeasures.
- Implement the correct counter measures.
- Learn how to work with and address Federal Security Committees.
- Learn how to execute and document the Facility Security Assessment more easily and confidently.
- Apply the ISC standards on the job.
